Deep Query Ask - Case Management

Project Overview

Project Name: Customer Support Case Management

Salesforce Cloud Used: Service Cloud

Role Focus: Salesforce Business Analyst

The organization wants to modernize and standardize how customer complaints and support requests are handled by implementing Salesforce Service Cloud as a centralized support system.

Encountering Challenges in Understanding Client Requirements

Problem Statement (AS-IS State)

The company currently manages customer support requests in a manual and unstructured manner using emails, phone calls, and Excel sheets. There is no centralized system to track customer complaints, resulting in delayed responses, inconsistent follow-ups, and poor visibility into case status.

Support agents lack a structured workflow, and management has no real-time insights into service performance. This negatively impacts customer satisfaction and operational efficiency.

AS-IS Business Issues

- Customer complaints received via email and phone calls
- Support team manually tracks cases in spreadsheets
- No centralized case management system
- No SLA tracking or escalation process
- Customers repeatedly follow up for status updates
- No visibility into open or overdue cases
- Difficult to measure agent workload and performance
- No historical data for audits or analysis

Business Impact (AS-IS)

- Delayed case resolution
- Poor customer experience and satisfaction
- Increased workload for support agents
- Inconsistent handling of customer issues
- No performance metrics for management
- Decisions based on assumptions instead of data
- Risk of SLA breaches and compliance issues

Business Objectives (TO-BE State)

The objective of this project is to implement Salesforce Service Cloud to standardize and automate customer support operations.

Key Objectives

- Capture all customer complaints in a single system

- Automate case creation and assignment
- Track case lifecycle from creation to closure
- Monitor SLAs and resolution timelines
- Improve communication with customers
- Provide real-time visibility through reports and dashboards
- Measure agent productivity and service quality
- Improve overall customer satisfaction

Scope Definition (BA View)

In Scope (Salesforce)

- Case creation (Email-to-Case / Web-to-Case)
- Case assignment rules
- Case lifecycle management
- SLA tracking using Entitlements
- Case escalation rules
- Reports and dashboards

Out of Scope

- Telephony (CTI) integration
- Chatbot or AI-based support
- ERP or billing system integration
- Knowledge base automation (optional future phase)

AS-IS vs TO-BE Comparison

Area	AS-IS	TO-BE
Case Tracking	Excel and Emails	Salesforce Cases
Assignment	Manual	Automated
SLA Tracking	Not available	Salesforce Entitlements
Customer Updates	Manual Follow-ups	Automated notifications
Reporting	None	Real-time dashboards
Agent Performance	Not measurable	Data-driven metrics

TO-BE Process Flow (Future State)

Customer submits issue via email or web form
Case is automatically created in Salesforce
Case is assigned to the appropriate support agent
Agent works on the case and updates status
Customer receives status notifications
SLA is monitored throughout the lifecycle
Case is resolved and closed
Management reviews reports and dashboards

Data Model (Logical – BA View)

Object	Purpose
Account	Represents customer organization
Contact	Represents customer individual

Case	Tracks customer complaints/support requests
Case Comment	Stores communication updates
Case History	Tracks status and ownership changes
Entitlement	Defines SLA rules
Case Milestone	Tracks SLA milestones
User	Support agents

Data Relationships

- Account → Contact
- Account → Case
- Contact → Case
- Case → Entitlement
- Case → Case Milestones

Business Requirement Document

BR-01 — Centralized Case Management

Business Requirement:

The business requires a centralized Salesforce Service Cloud solution to capture, manage, track, and resolve customer support requests.

Business Benefit:

All customer issues can be managed from one centralized system.

BR-02 — Email-to-Case

Business Requirement:

The business requires customer emails to be automatically converted into Salesforce Cases.

Business Benefit:

Reduces manual Case creation and ensures customer emails are captured systematically.

Your Salesforce Implementation:

Customer
↓
Email
↓
Email-to-Case
↓
Salesforce Case

BR-03 — Case Categorization

Business Requirement:

The business requires Cases to be categorized according to the customer's issue.

Example categories:

- Technical Issue
- Billing Complaint
- General Inquiry

Salesforce: Case Type Picklist

BR-04 — Automatic Case Assignment

**Business Requirement:**

The business requires Cases to be automatically assigned to the appropriate support Queue based on defined business rules.

Example:

Technical Issue

Technical Support Queue

Billing Complaint

Billing Support Queue

General Inquiry

General Support Queue

Salesforce: Case Assignment Rule / Flow + Queues

BR-05 — Automatic Customer Response

Business Requirement:

The business requires customers to receive an automatic confirmation after a Case is created from their email.

Example:

Customer Email

Case Created

Auto Response

Customer receives confirmation

Salesforce: Case Auto-Response Rule + Lightning Email Template

BR-06 — Case Priority

Business Requirement:

The business requires Cases to be prioritized according to urgency.

Example:

- High
- Medium
- Low

Salesforce: Case Priority field

BR-07 — Case Lifecycle

Business Requirement:

The business requires support agents to track Cases throughout their lifecycle.

Example:

New

Working

Escalated

Resolved

Closed

BR-08 — Security

Business Requirement:

The business requires customer and Case information to be accessible only to authorized users according to their responsibilities.

Salesforce: Profiles, Permission Sets, Roles, Sharing Settings, Object/Field permissions.

BR-09 — Reports & Dashboard

Business Requirement:

The business requires management reports and dashboards to monitor customer-support operations.

Reports can include:

- Cases by Status
- Cases by Priority
- Cases by Type
- Cases by Origin
- Cases by Owner
- Open vs Closed Cases

FUNCTIONAL REQUIREMENTS DOCUMENT (FRD)

13. FRD Purpose

This FRD translates the approved business requirements into functional system behavior and maps each requirement to Salesforce configuration or functionality.

FRD principle: What the system should do → Salesforce component → expected result → test scenario.

14. Solution Overview

Business Requirement → Functional Requirement → Salesforce Component → Configuration → Testing → Business Result

Business Need

Salesforce Solution

Business Need	Salesforce Solution
Centralized support cases	Case Object
Issue categorization	Case Type field
Urgency	Priority field
Customer channel	Origin + Web-to-Case / Email-to-Case
Automatic routing	Flow / Assignment Logic + Queues
Lifecycle tracking	Case Status
Access control	Profiles / Permission Sets / Sharing / Field Access
Management visibility	Reports & Dashboards

15. Functional Requirements

FR-01 — Case Creation

Requirement: Authorized support users should be able to create a Case with required customer and issue information.

Salesforce Component: Case Object

Configuration / Data: Subject, Description, Case Type, Priority, Origin, Account, Contact, Owner.

Expected Result: A Case is created successfully with required information.

FR-02 — Case Categorization

Requirement: The system should categorize Cases according to the customer issue.

Salesforce Component: Case Type field

Configuration / Data: Technical Issue, Billing Complaint, General Inquiry.

Expected Result: Case can be categorized consistently.

FR-03 — Priority Management

Requirement: Support users should be able to identify urgency.

Salesforce Component: Priority field

Configuration / Data: High, Medium, Low.

Expected Result: Priority is visible and reportable.

FR-04 — Case Origin

Requirement: The system should identify the channel through which the case originated.

Salesforce Component: Origin field

Configuration / Data: Email, Phone, Web

Expected Result: Origin is captured consistently.

FR-05 — Automatic Case Assignment

Requirement: New Cases should be routed to the appropriate support queue based on Case Type.

Salesforce Component: Record-Triggered Flow + Queues

Configuration / Data: Decision outcomes for Technical, Billing and General.

Expected Result: Owner/routing is set according to business rule.

FR-06 — Web-to-Case

Requirement: A customer website support submission should create a Salesforce Case.

Salesforce Component: Web-to-Case

Configuration / Data: Required form fields and default values as applicable.

Expected Result: Web submission creates a Case.

FR-07 — Email-to-Case

Requirement: Customer support emails should be captured as Salesforce Cases where configured.

Salesforce Component: Email-to-Case

Configuration / Data: Routing/service configuration.

Expected Result: Email creates a Case.

FR-08 — Case Status / Lifecycle

Requirement: Support users should track Case progress.

Salesforce Component: Case Status

Configuration / Data: Use approved org values; e.g. New, Working, Escalated, Closed.

Expected Result: Progress is visible and reportable.

FR-09 — Security & Access

Requirement: Users should only access Case data required for their role.
Salesforce Component: Profiles / Permission Sets / Sharing / Field Access
Configuration / Data: Role-based access design.
Expected Result: Access follows approved security rules.

FR-10 — Reporting & Dashboard

Requirement: Management should have visibility into support operations.
Salesforce Component: Reports & Dashboards
Configuration / Data: Status, Priority, Type, Origin, Owner/Queue and open/closed metrics.
Expected Result: Required management metrics are available.

16. Detailed Flow Specification

Element	Configuration / Logic
Start	Record-Triggered Flow on Case
Trigger	When a record is created for the initial demo
Decision	Determine Case Type
Outcome 1	Case Type = Technical Issue
Outcome 2	Case Type = Billing Complaint
Outcome 3	Case Type = General Inquiry
Action	Set/route Case Owner to corresponding Queue
Default	Other Case Type / no routing, as define
End	Flow completes after routing

Data / Field Specification

Field	Purpose	Suggested Values
Case Type General Inquiry	Issue categorization	Technical Issue; Billing Complaint;
Priority	Urgency	High; Medium; Low
Status Working; Escalated; Closed	Lifecycle	Use approved org values; e.g. New;
Origin	Request channel	Email; Phone; Web
Subject	Short summary	Customer issue summary
Description	Detailed issue	Customer issue details
Account	Customer organization	Related Account
Contact	Customer contact	Related Contact
Owner	Case ownership	User or Case Queue

18. Acceptance Criteria

ID	Acceptance Criteria
AC-01	Authorized user can create a Case with required information.
AC-02	Case Type values are available and consistently used.

- AC-03 Priority identifies urgency.
- AC-04 Technical Issue routes to Technical Support Queue.
- AC-05 Billing Complaint routes to Billing Support Queue.
- AC-06 General Inquiry routes to General Support Queue.
- AC-07 Configured web submission creates a Case.
- AC-08 Configured email submission creates a Case.
- AC-09 Case status can be updated through its lifecycle.
- AC-10 Reports provide required management visibility.

19. Test Scenarios / Test Cases

Test ID	Scenario	Expected Result
TC-01	Create normal Case	Case is created successfully

TC-02	Create Technical Issue	Technical queue/routing applied
TC-03	Create Billing Complaint	Billing queue/routing applied
TC-04	Create General Inquiry	General queue/routing applied
TC-05	Submit Web-to-Case	Case created in Salesforce
TC-06	Send support email	Case created if Email-to-Case is configured
TC-07	Update Case Status	Status changes successfully
TC-08	Check user access	Access follows security requirement
TC-09	Open report	Expected cases/metrics displayed

Requirement Traceability Matrix (RTM)

BRD	FRD	Salesforce Solution	Test
BR-01	FR-01	Case Object	TC-01
BR-02	FR-02	Case Type	TC-02

BR-03	FR-03	Priority	TC-03
BR-04	FR-05	Flow + Queues	TC-02/03/04
BR-05	FR-06/07	Web-to-Case / Email-to-Case	TC-05/06
BR-06	FR-08	Case Status	TC-07
BR-07	FR-09	Security Model	TC-08
BR-08	FR-10	Reports/Dashboard	TC-09

1. Final BA Presentation Mapping

Problem → BRD → Requirements → FRD → TO-BE Flow → Salesforce Configuration → Working Flow → Test Result →

Business Benefit

Presentation line: “I first documented the business problem and requirements in the BRD. I then translated

those requirements into functional specifications in the FRD and mapped them to Salesforce capabilities.

Finally, I configured and tested the solution.”

22. Final Project Outcome

- Centralized customer Case management
- Standardized case categorization and priority
- Improved case routing
- Better case lifecycle visibility
- Multiple intake channels where configured
- Role-based access design
- Improved reporting and management visibility

23. Finalization Note

This BRD/FRD is a professional demo-project baseline. Before final submission, replace assumptions with

the exact requirements agreed for your project and verify every Salesforce configuration in your own org.

Salesforce screen labels can vary by org/release.

Milestone Breakdown (BA-Driven) :

Milestone Breakdown (BA-Driven) is a structured approach used by a Salesforce Business Analyst to divide a project into logical, manageable phases based on business goals rather than technical implementation steps.

Each milestone represents a business outcome that the Salesforce solution must achieve. The Business Analyst defines *what* needs to be accomplished at each stage, *why* it is needed from a business perspective, and *how success will be measured*.

Technical teams (Admins/Developers) then implement the solution based on these defined milestones.

Milestone 1 : Salesforce BA Foundation (Account & Navigation)

Introduction

Are you new to Salesforce and the **Business Analyst role**?

Not sure how Salesforce supports business processes or where a BA should start?

This milestone introduces **Salesforce from a Business Analyst perspective**.

You will learn **what Salesforce is**, how to access it, and how a BA explores Salesforce—not to code, but to **understand business data, processes, and users**.

What Is Salesforce (BA Perspective)

Salesforce is a **customer success platform** that helps organizations:

- Manage customer data
- Automate business processes
- Improve sales and service efficiency
- Provide insights through reports and dashboards

👉 As a **Salesforce Business Analyst**, your role is to:

- Understand business needs
- Map them to Salesforce features
- Ensure Salesforce supports business outcomes

Milestone Objective (For BA)

By the end of this milestone, students will:

- Create a Salesforce Developer account
- Access Salesforce Setup
- Understand Salesforce UI from a BA point of view
- Identify where business data and processes live.

Activity 1: Creating Developer Account:

Creating a developer org in salesforce.

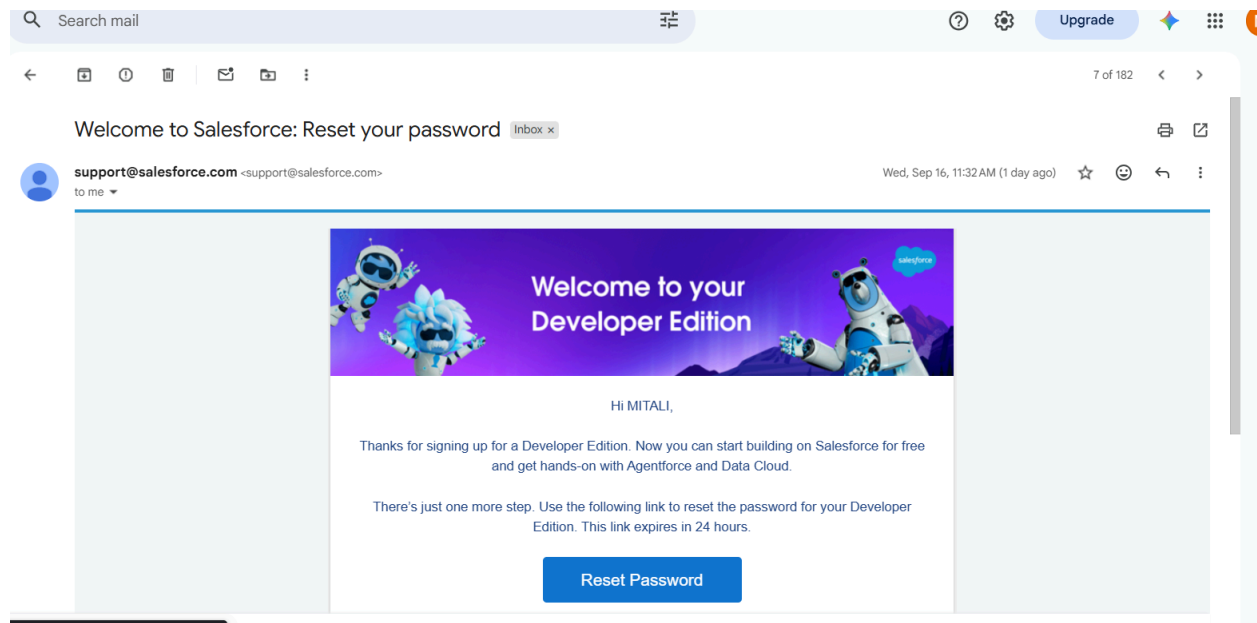

1. Go to <https://developer.salesforce.com/signup>
2. On the sign-up form, enter the following details:

- 1) First name & Last name
- 2) Email
- 3) Job Title: Developer
- 4) Company: College Name
- 5) Country: India

Click on sign me up after filling these.

Activity 2: Account Activation

1. Go to the inbox of the email that you used while signing up. Click on the verify account to activate your account. The email may take 10-30mins and sometimes 2 hours.

2. Click on reset password.
3. Give a password and answer a security question and click on change password.

Change Your Password

Enter a new password for **lead@sb.oom**.
Make sure to include at least:

- ✓ 8 characters
- ✓ 1 letter
- ✓ 1 number

* New Password

..... Good

* Confirm New Password

..... Match

Security Question

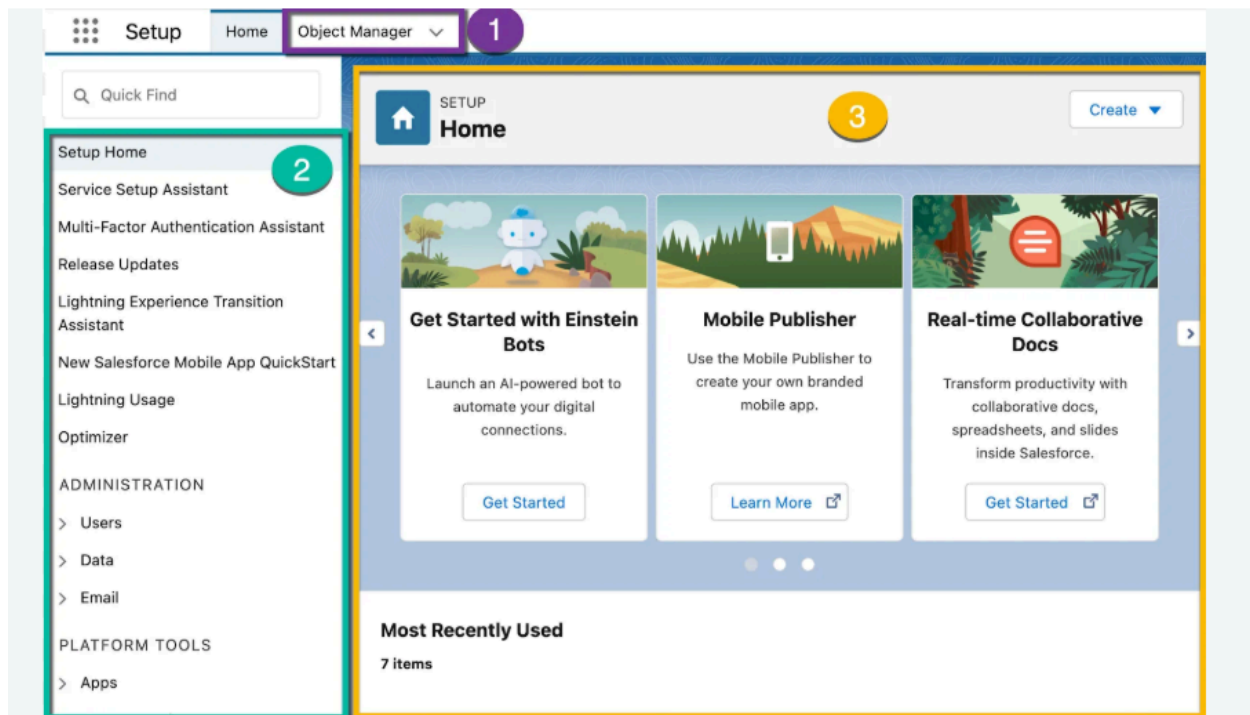

▼ In what city were you born?

* Answer

asdfghjkl

Change Password

4. Then you will redirect to your salesforce setup page.

Milestone 2: Case Object & Fields

Objective: Ensure required business data is captured.

BA Activities

- Identify required case fields:
 - Case Type
 - Priority
 - Status
 - Origin
 - Description

- Define picklist values

Deliverable

- Prepare Field requirement document

The screenshot shows the 'Case Information' form in Salesforce. The form is divided into several sections: 'Case Owner' (MITALI PIDWA), 'Case Number', 'Contact Name' (MITALI PIDWA), 'Account Name' (Search Accounts...), 'Type' (Electrical), 'Case Reason' (Breakdown), 'Status' (New), 'Priority' (Medium), and 'Case Origin' (Email). At the bottom, there is a 'Web Information' section with checkboxes for 'Assign using active assignment rule' and 'Send notification email to contact', and fields for 'Web Company' and 'Web Phone'. The 'Save' button is highlighted in blue.

Milestone 3: Case Creation Channels

Objective: Capture cases from multiple channels.

BA Activities

- Define case intake channels:
 - Email-to-Case
 - Web-to-Case
- Define default values and ownership

Deliverable

- Case creation flow diagram

Activity 1 : Create Email to Case

Email-to-Case allows customer emails sent to a support email address to automatically create Case records in Salesforce.

Step 1 : In Quick Find Box Search Email-To-Case and Click It and Continue.

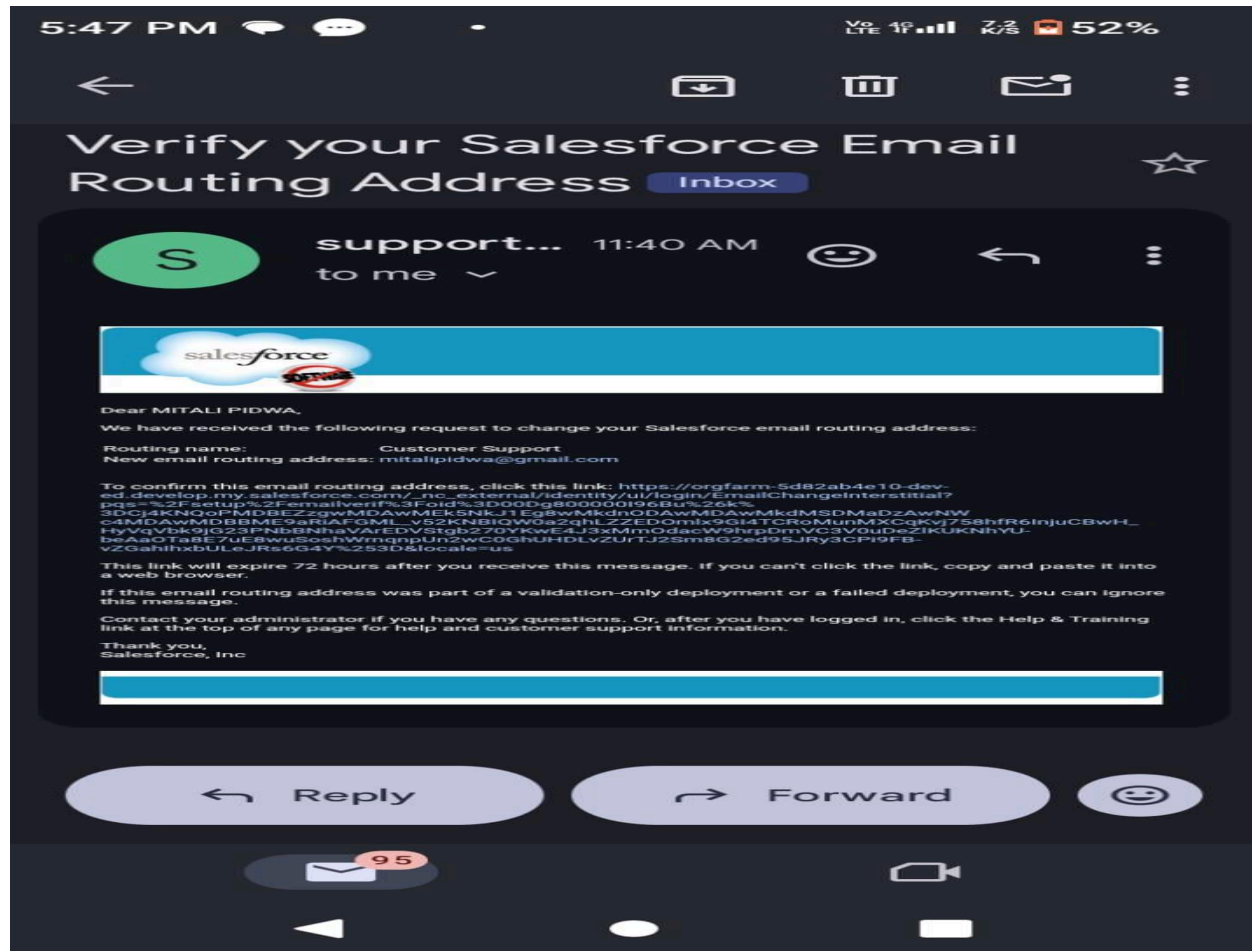

Step 2 : Click Edit and Enable Email-to-Case and Enable on-Demand Service and Save it.

Step 3 : Routing Addresses

The screenshot shows the Salesforce Setup interface for the 'Email-to-Case' feature. The left sidebar contains a navigation menu with options like 'Email Domain Filters', 'Email Relays', 'Email Footers', 'Email to Salesforce', 'Enhanced Email', 'Filter Email Tracking', 'Email Integration and Sync', 'Lightning Email Templates', 'Mail Merge Templates', 'Organization-Wide Addresses', 'Outlook Integration and Sync', 'Send through External Email Services', 'Test Deliverability', 'Feature Settings', 'Character', 'Email Settings', 'Service', 'Email-to-Case', 'Process Automation', 'Workflow Actions', 'Email Alerts', 'Custom Code', 'Email Services', 'Environments', 'Log', 'Email Log Files', 'Monitoring', and 'Email Snapshots'. The main content area is titled 'Email-to-Case' and includes a warning message: 'Salesforce now sends emails only from verified domains. To avoid delivery failures, verify your email domains or enable your substitute email sending domain. Learn More'. Below this, there are several sections with checkboxes and links for configuration: 'Settings' (with a 'Save' button), 'Send Emails from Cases', 'On-Demand Service', and 'Routing Addresses'. A large blue download arrow icon is visible on the right side of the page. At the bottom, there is a table for 'Routing Addresses' with columns for Action, Source, Routing Name, Case Owner, Email Address, Verification, Controlled by Permission Set, and Email Services Address. The table contains one entry for 'EmailtoCase' with a routing name of 'Customer Support' and an email address of 'emailto@sales.com'.

Action	Source	Routing Name	Case Owner	Email Address	Verification	Controlled by Permission Set	Email Services Address
Edit	EmailtoCase	Customer Support		emailto@sales.com	Verified	No	emailto@sales.com

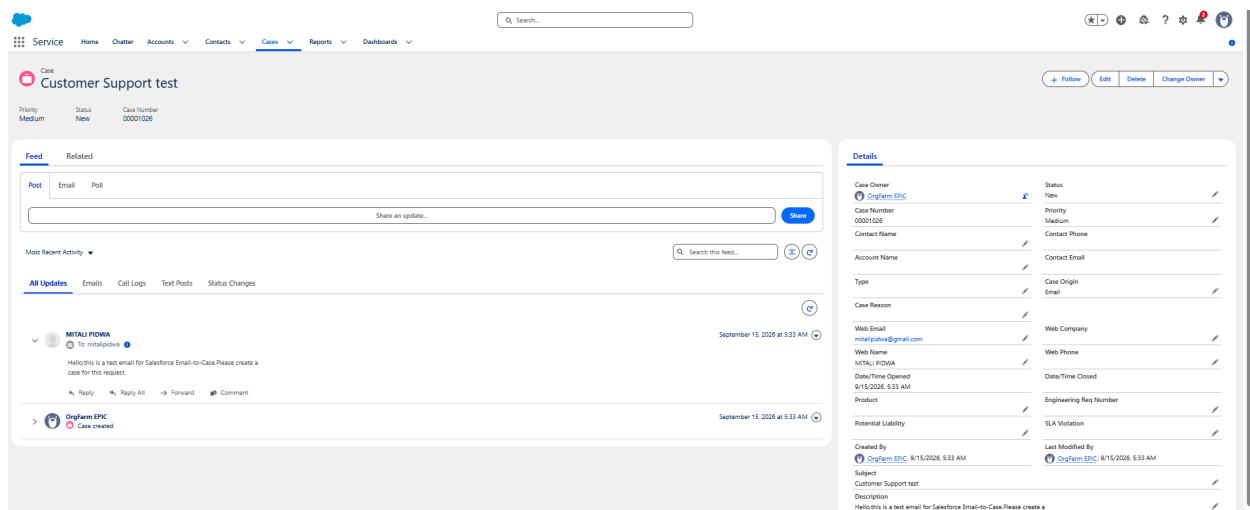

Step 4 : Open Your Gmail Check It you will Get Requesting Access Email from Salesforce

Step 5: Send an email from Gmail. Then, go to Salesforce and verify that a Case record has been created successfully. Copy Email-To-Case Gmail Link which You have Created.

Output

Milestone 4 : Creation Web-To-Case. Web-to-Case allows customers to submit issues through a website form, which automatically creates a Case in Salesforce.

Activity 1 : Create Web to Case

[illegible]

Milestone 6 : Creating Assignment Rule Ensure that every incoming customer case is automatically routed to the correct support agent or support queue based on defined business rules. This helps reduce response time, balance workload, and improve customer satisfaction.

Why This Milestone Is Important (BA Context)

Without assignment rules:

- Cases may remain unassigned
- High-priority cases may be delayed
- Agents may be overloaded while others are idle
- SLA breaches may occur

Assignment rules ensure right case → right agent → right time.

Objective: Ensure cases are routed correctly.

BA Activities

- Define assignment logic:
 - Based on Case Type
 - Based on Priority
- Validate workload distribution

Deliverable

- Case assignment rules document.

Activity 1 : Create Case Assignment Rule.
